

Design Sketch

This design shows a screen where the students collaborate by sending text messages to a common group chat.

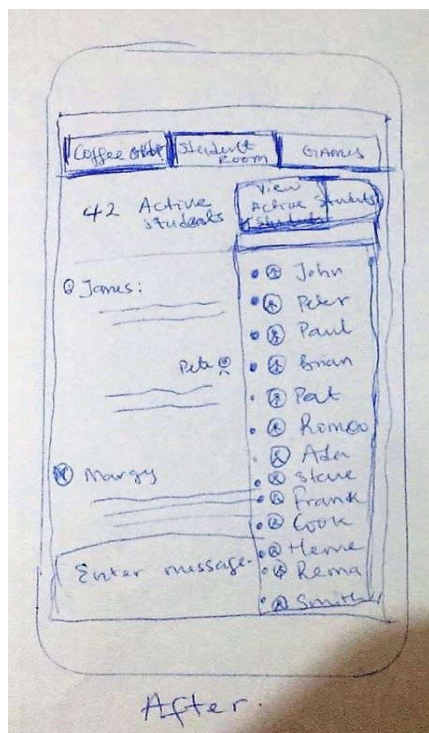

Students Collaboration in the student chat room Iteration 1

What it is about?

The page shows an active “Student Room tab “ with a chat history form students communicating on the app.

Actions for the users to take

The student enters a message in the “Enter message” field and clicks on the send button to post a message for all students in the chat room to see.

Students Collaboration in the student chat room Iteration 2

Design Principle(s) applied

- **Proximity:** The “view active students” button is placed on the top right of the screen below the tabbed menu. Adjacent to the button is a count on the number of active students.
- **Space:** enough space is set around elements to give a good feel of the app sections.

Design rationale

- Student clicks on the “view active students” button to see a dropdown list of active students
- Allow students to find the appropriate classmate for a discussion.
