

Changes made:

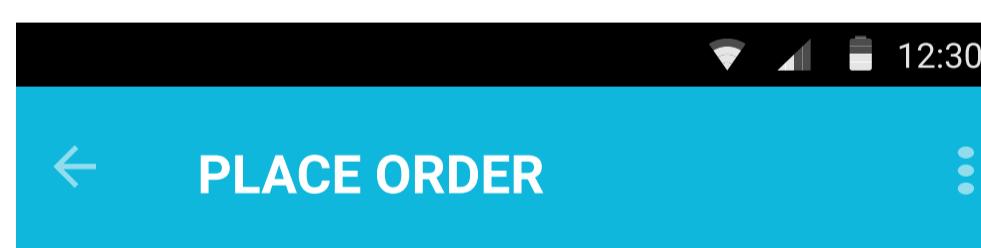

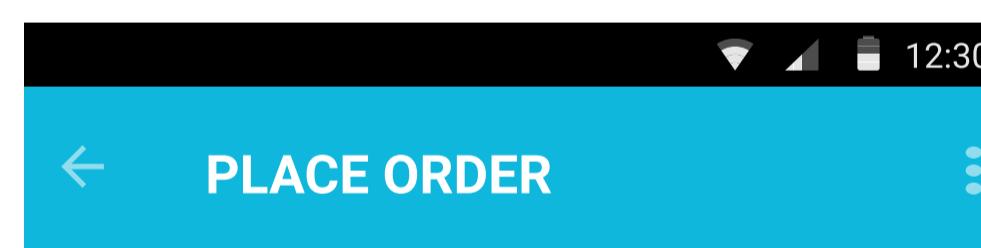

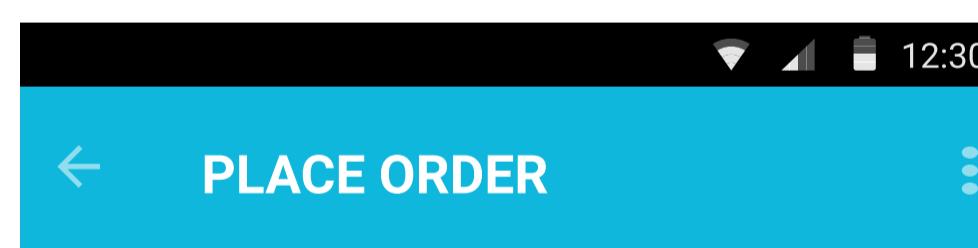

We can do a better design by giving the possibility for a user to search for offers in any restaurant from in an area. Rather than viewing only featured offers from random areas, users can as well search for offers in an area of their choice. When a user is logged in, he/she can use the search bar provided to find offers. Thus we added the search field to the screen below (right)

**Featured Offers****Featured Offers****Changes Made:**

Here we could improve the design by adding an image avatar to the "menu navigation drawer". This improvement is to enhance the looks of our application and give the user a feel of personalization. Where he/she can decide to put a custom avatar that suits their taste. Thus we craged the "Menu drawer" to include the avatar the top left of the screen.

**Changes Made:**

Here we improved the design by adding an "Accept" button and a deactivated (grayed out) "PAY" button, we also included a design with a "Decline" button. We added the "Accept" button such that the user would click on it before he can initiate a payment process. After the user accepts an offer, the accept button now changes to "Decline" and the "PAY" button becomes active (green). This improvement would provide a better and more controllable payment experience for the user than the previous which just had the direct payment.

**Cascadia Blend Decaf FTO**

This coffee is so smooth you wouldn't know it is decaffeinated! A blend of some of the best coffee growing regions of the world.
"The goal of this mix is to allow the Cascadia to be used as a satisfying drip blend, while also having enough complexity to shine in the espresso machine as well."
